SUMMARY

Software developer with 2+ years of full-stack experience building and maintaining enterprise applications, including features for manufacturing workflows. As part of the Aquiweb team, contributed to features deployed for client organizations whose MES systems served 100+ users, including managers and shop-floor operators, and built a CSV import workflow for 20,000+ complex operations. Professional experience includes Java, Spring Boot, Angular, TypeScript, REST APIs, and relational databases, supported by a strong foundation in object-oriented programming, data structures, and algorithms. Brings a practical, user-focused approach to problem-solving and is interested in building on full-stack experience while continuing to grow in automation, cloud computing, and AI.

PROFESSIONAL EXPERIENCE

Full-Stack Software Developer

4CAD Group Logiciels Inc. | Montreal, QC, Canada | February 2024 - October 2026

- As part of the Aquiweb development team, built and deployed full-stack features for client organizations whose MES systems served 100+ users, including managers and shop-floor operators, supporting production, inventory, and equipment workflows.
- Built REST API integrations and data import/export workflows.
- Built a CSV import workflow that processed 20,000+ complex operations across multiple work orders, some with hundreds of operations. Added validation, post-import processing, and dependency creation, with transactional rollback to prevent partial imports.
- Implemented stock checks that prevented users from recording material consumption above available inventory.
- Created client-specific operational reports using JasperReports.
- Investigated production issues using logs, SQL queries, and workflow reproduction; reproduced problems, validated fixes, and supported releases.
- Collaborated with developers, functional consultants, and clients to clarify requirements, document technical work, and deliver tested features; participated in code reviews and GitLab/Jenkins CI/CD workflows.
- Used OpenAI Codex for codebase exploration, debugging, testing support, and documentation, reviewing its suggestions for accuracy and context before applying them.

Software Developer Consultant - Sage X3/ERP

4CAD Group Logiciels Inc. | Montreal, QC, Canada | January 2023 - January 2024

- Customized and maintained Sage X3 ERP functionality using Sage X3 4GL and SQL, adapting existing behavior to client requirements and workflows.
- Partnered with English- and French-speaking clients to clarify requirements and validate workflow-specific solutions.
- Investigated application and database issues, reproduced defects, tested changes, and supported technical troubleshooting.
- Created and maintained client-specific Crystal Reports for operational reporting, using features such as formulas, parameters, conditional logic, and subreports.
- Streamlined the internal weekly pizza-ordering process for 40+ employees by proposing and implementing an automated workflow with a shared spreadsheet and Power Automate. It replaced manual order collection, tallied pizza choices and dietary requests, sent a reminder the day before, and reset weekly; it remains in use after more than 3 years.

Developer Intern

4CAD Group Logiciels Inc. | Montreal, QC, Canada | October 2022 - December 2022

- Developed a prototype that connected to the Sage X3 REST API, retrieved manufacturing orders, and displayed them in a web interface with a weekly calendar view.

Producer

Imgnation Studios | Brazil | February 2021 - December 2021

- Developed and debugged game functionality using C# and Unity; participated in Agile development, testing, QA, bug tracking, and release delivery.

Project Management Intern

Imgnation Studios | Brazil | August 2020 - January 2021

- Served as acting Scrum Master for a small mobile game development team, supporting sprint planning, task coordination, team communication, and delivery.

TECHNICAL SKILLS

Programming: Java, TypeScript, JavaScript, SQL, Sage X3 4GL, C#.

Frontend: Angular, RxJS, Reactive Forms, Angular Routing, HTML, CSS, SCSS.

Backend and data: Spring Boot, Hibernate/JPA, REST APIs, API integration, PostgreSQL, Microsoft SQL Server, stored procedures, Flyway, Bean Validation, Jackson, data import/export, data validation.

Testing and delivery: Unit, functional, and regression testing; JUnit; debugging; production troubleshooting; code reviews; technical documentation; Git, GitLab, Jenkins, CI/CD, Gradle, Yarn, Agile/Scrum.

Reporting: JasperReports, Crystal Reports.

Development tools and platforms: IntelliJ IDEA, Eclipse, Visual Studio Code, DBeaver, pgAdmin, SQL Server Management Studio, Postman, Chrome DevTools, Unity, Confluence, OpenAI Codex.

Additional project and academic technologies: Node.js (internship prototype); Python, PyPDF2, ReportLab, pytz, and Linux/Ubuntu (academic project); C and C++ (coursework and tutoring); Arduino (coursework and small personal projects).

CERTIFICATIONS

AI Literacy — IBM SkillsBuild | Nov 2026 | View digital badge

EDUCATION

Diploma of College Studies (DCS/DEC), Computer Techniques: New Media Programming

Institut Grasset | Montreal, QC, Canada | August 2021 - December 2022

- Graduated at the top of the class with a 94% weighted average.
- Relevant coursework included web development, databases, connected objects and object-oriented programming.
- Selected as one of two students from a cohort of 15 to tutor classmates in object-oriented programming with C++.

Computer Science Coursework

Universidade Federal de Santa Maria (UFSM) | Brazil | March 2013 - November 2016

- Completed coursework that included data structures, algorithms, C, C++, object-oriented programming, and databases.
- Tutored C programming.
- Selected as one of two students from a cohort of 50 to compete in an ICPC programming contest.
- Helped deliver introductory workshops on programming logic for high school students.

Bachelor of Business Administration

Universidade Federal de Santa Maria (UFSM) | Brazil | March 2017 - January 2021
