SUMMARY

Software developer with 2+ years of full-stack experience building and maintaining enterprise applications, particularly for manufacturing environments, with previous ERP consulting experience. Developed user-facing workflows, backend functionality, REST API integrations, and data processing solutions using mainly Java, Spring Boot, Angular, TypeScript, and relational databases. Combines a strong foundation in object-oriented programming, data structures, and algorithms with a practical, user-focused approach to problem-solving. Interested in continuing to grow in full-stack development, automation, cloud computing, and AI.

PROFESSIONAL EXPERIENCE

4CAD Group Logiciels Inc. | Montreal, QC, Canada

A software company specializing in digital transformation for the manufacturing industry, offering ERP, MES, and other industrial software solutions.

Full-Stack Software Developer

February 2024 - October 2026

- Built and deployed full-stack features used by 100+ shop-floor users and approximately 20 managers, supporting production, inventory, and equipment workflows.
- Developed and maintained backend functionality using Java and Spring Boot, applying OOP and SOLID principles to write modular, maintainable code and adapt features to client-specific business requirements.
- Built REST API integrations and data import/export workflows.
- Built a CSV import workflow that processed 20,000+ complex operations across multiple work orders, some with hundreds of operations. Added validation, post-import processing, and dependency creation, with transactional rollback to prevent partial imports.
- Implemented stock checks that prevented users from recording material consumption above available inventory.
- Created client-specific operational reports using JasperReports.
- Investigated production issues using logs, SQL queries, and workflow reproduction; reproduced problems, validated fixes, and supported releases.
- Collaborated with developers, functional consultants, and clients to clarify requirements, document technical work, and deliver tested features; participated in code reviews and GitLab/Jenkins CI/CD workflows.
- Used OpenAI Codex for codebase exploration, debugging, testing support, and documentation, reviewing its suggestions for accuracy and context before applying them.

Software Developer Consultant - Sage X3/ERP

January 2023 - January 2024

- Customized and maintained Sage X3 ERP functionality using Sage X3 4GL and SQL, adapting existing behavior to client requirements and workflows.
- Partnered with English- and French-speaking clients to clarify requirements and validate workflow-specific solutions.
- Investigated application and database issues, reproduced defects, tested changes, and supported technical troubleshooting.
- Created and maintained client-specific Crystal Reports for operational reporting, using features such as formulas, parameters, conditional logic, and subreports.
- Streamlined an internal administrative process for 40+ employees by designing and implementing an automated workflow using a shared spreadsheet and Power Automate. Replaced manual data collection with automated tracking, reminders, and weekly resets. The solution remained in use for over 3 years.

Developer Intern

October 2022 - December 2022

- Developed a prototype that connected to the Sage X3 REST API, retrieved manufacturing orders, and displayed them in a web interface with a weekly calendar view.

TECHNICAL SKILLS

Programming: Java, TypeScript, JavaScript, SQL, Sage X3 4GL, C#.
Frontend: Angular, RxJS, Reactive Forms, Angular Routing, HTML, CSS, SCSS.
Backend and Data: Spring Boot, Hibernate/JPA, API integration, PostgreSQL, Microsoft SQL Server, stored procedures, Flyway, Bean Validation, Jackson, data import/export, data validation.
Software Engineering: Object-Oriented Programming (OOP), SOLID principles, REST APIs, code reviews, debugging, technical documentation.
Testing and Delivery: Unit, functional, and regression testing; JUnit; production troubleshooting; Git, GitLab, Jenkins, CI/CD, Gradle, Yarn, Agile/Scrum.
Reporting: JasperReports, Crystal Reports.
Development Tools and Platforms: IntelliJ IDEA, Eclipse, Visual Studio Code, DBeaver, pgAdmin, SQL Server Management Studio, Chrome DevTools, Unity, Confluence, OpenAI Codex.
Additional Project and Academic Technologies: Node.js; Python, PyPDF2, ReportLab, pytz; Linux/Ubuntu; C, C++; Arduino.

EDUCATION

Diploma of College Studies (DCS/DEC), Computer Techniques: New Media Programming
Institut Grasset | Montreal, QC, Canada | August 2021 - December 2022

- Graduated at the top of the class with a 94% weighted average.
- Relevant coursework included web development, databases, connected objects and object-oriented programming.
- Selected as one of two students from a cohort of 15 to tutor classmates in object-oriented programming with C++.

Computer Science Coursework
Universidade Federal de Santa Maria (UFSM) | Brazil | March 2013 - November 2016

- Completed coursework that included data structures, algorithms, C, C++, object-oriented programming, and databases.
- Tutored over 20 students in C programming across two semesters.
- Selected as one of two students from a cohort of 50 to compete in an ICPC programming contest.

Bachelor of Business Administration
Universidade Federal de Santa Maria (UFSM) | Brazil | March 2017 - January 2021
